Art Unit: 1711

1. Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Within claim 1, there are two occurrences of "represents". Furthermore, it is unclear why a comma is between "12" and "carbon".

Within claim 5, components A2 and A4 are not mutually exclusive when the molecular weight is 400.

Within claims 5 and 6, the type of percent (weight or mole) and the basis for the percent values has not been specified.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blum et al. ('393) in view of EP 159117.

Art Unit: 1711

Blum et al. disclose water dispersible binder compositions comprising a urethane modified polyester polyol, derived from reactants that overlap those of applicants, and a blocked polyisocyanate component. See abstract and columns 3-6.

4. Though Blum et al. disclose numerous blocking agents for masking the polyisocyanate, patentees are silent regarding the use of pyrazole blocking agents. Still, the use of pyrazoles as blocking agents for polyisocyanates that are to be incorporated into aqueous compositions in masked form was known at the time of invention. This position is supported by the teachings of EP 159117 at page 4, lines 4+. Additionally, the secondary reference discloses that a benefit of using the pyrazole blocking agents is that the deblocking temperature is significantly lower as compared to the deblocking temperature of other conventional blocking agents. Since lower deblocking temperatures require less energy input and, therefore, require less expense, the position is taken that it would have been obvious to utilize the pyrazole blocking agents within the primary reference, so as to obtain a coating system that is less expensive to apply.
